

ALPINE AIR JET SIEVE 111 X 200 LS-N IN A SENSATIONAL GET-UP

ALPINE AIR JET SIEVE 200 LS-N

Hosokawa Alpine was formed 111 years ago. Since 1954, the Alpine air jet sieve has been used to measure the particle size of powders. Continuously improved and optimised, it has now become the best-selling instrument for particle size analysis worldwide. „Measured with the Alpine Air Jet Sieve“ has become a mark of quality for fine powders. The air jet sieve is even mandated in several national and international standards as a quality measuring unit to determine the particle sizes of certain products.

We will be producing a limited edition of 111 air jet sieves 200 LS-N in 4 unusual and decorative finishes especially for the ACHEMA 2009.

Make a note of **1 June 2009** in your calendar: this is the day our campaign starts.

Decide quickly.

Worldwide, there are only **111** of these unusual air jet sieves available.

Select your finish.

The air jet sieve is available in 4 decorative finishes at **no extra charge** for the **special finish**.

Classic Style
