

ORDER A NEW AIR JET SIEVE AND POCKET THE SCRAPPAGE BONUS

ALPINE AIR JET SIEVE 200 LS-N

Hosokawa Alpine was formed 111 years ago. Since 1954, the Alpine air jet sieve has been used to measure the particle size of powders. Continuously improved and optimised, it has now become the best-selling instrument for particle size analysis worldwide. „Measured with the Alpine Air Jet Sieve“ has become a mark of quality for fine powders. The air jet sieve is even mandated in several national and international standards as a quality measuring unit to determine the particle sizes of certain products.

Secure your scrappage bonus.

Send us your old air jet sieve or sieve tower.
